

CHEMICAL RESISTANCE CHART

Key

E Excellent Chemical Resistance

G. Good Chemical Resistance

F Fair Chemical Resistance

G Good Chemical Resistance		P Poor Chemical Resistance					
CHEMICAL NAME	NITRILE	CHEMICAL NAME	NITRILE	CHEMICAL NAME	NITRILE	CHEMICAL NAME	NITRILE
Acetalehyde	Р	Diallylamine	Р	Hydrofluoric Acid, <50%	E	Pentane	E
Acetic Acid	G	Dichloroacetyl Chloride	Р	Isobutyl alcohol	E	Perchloric Acid, 30-70%	E
Acetic Anhydrine	F	Diesel Fuel	E	Isooctane	E	Perchloroethylene	G
Acetone	F	Diethamolamine	E	Isopropyl Alcohol	E	Peroxyacetic Acid	Р
Acetonitrile	F	Diethylamine	G	Isopropylamine	Р	Petroleum Ethers, 80-11 0C	G
Acrylic Acid	G	Die Thylene Glycol	E	Jet Fuel, <30% Aromatics	G	Phenol, >70%	E
Ammonium Acetate	E	Die Thylene Triamine	Р	73-248C	ŭ	Phosphoric Acid, >70%	E
Ammonium Carbonate	E	Diisobutylketone	G	Kerosene	E	Picric Acid	E
Ammonium Flouride 30-70%	E	Diisobutylamine	E	Lactic Acid	E	Potassium Hydroxide	E
Ammounium Hydroxide <70%	E	Dime Thyl Ether	G	Lauric Acid	G	Potassium Iodide	E
Amyl Alcohol	E	Dime Thyl Sulfoxide (DMSOC)	G	Malathion, 30-70%	E	Propylacetate	F
Aniline	F	Dime Thylace Tamide	F	Methanol	F	Pyridine	Р
Aqua Regia	Р	Dimethylformamide (DMF)	Р	Methyl Acetate	Р	Silicon Etch	Р
Benzaldehyde	Р	1,3-Dioxane	Р	Methyl Ethyl Ketone	Р	Silver Nitrate	G
Benzene	G	1,4-Dioxane	Р	Methyl Isobutyle Ketone	Р	Sodium Carbonate	E
Boric Acid	E	Epichlorohydrin	Р	Methyl Methacrylate	Р	Sodium Chloride	E
Bromopropionic Acid	F	Ethanol	E	Methylene Chloride	Р	Sodium Flouride	E
Butylacrylate	Р	Ethylacetate	Р	N-Amylacetate	F	Sodium Hydroxide, 30-70%	E
ButylCellusolve	G	Ethylether	G	N-Butylacetate	F	Sodium Hypochorite	E
Calcium Hydroxide	E	Ethylene Glycol Dimethylether	F	N-Butyl Alcohol	E	Sodium Thiosulfate	E
Carbon Disulfide	G	Ethylene Dichloride	Р	N-Methyl-2-Pyrrolidone	Р	Styrene	Р
Carbon Tetrachloride	Р	Ethylene Glycol	E	N-Nitrosodie Thylamine	Р	Sulfuric Acid, 30-70%	F
Chlorobenzene	Р	Formaldehyde, 30-70%	E	N-Propyl Alcohol	E	Sulfuric Acid, <30%	G
Chlorodibromomethane	Р	Formic Acid	G	Naphtha, 15-20% Aromatics	E	Sulfuric Acid, >70%	Р
Chloroform	Р	Freon 113 OR TF	E	Naphta, <3% Aromatics	E	Tannic Acid	G
Chloronaphthalenes	Р	Freon TMC	F	Nitric Acid, <30%	E	1,2,4,5-Tetrachlorobenzene	E
Chromic Acid	F	Furfural	Р	Nitric Acid, 30-70%	Р	1,1,1,2-Tetrachloroethane	F
Cisplatin	G	Gasoline, Petrol, 40-50% Aromatics	E	Nitrobenzene	F	Tetrahydrofuran	F
Citric Acid 30-70%	G			Nitroethane	Р	Toluene	F
Cyclohexane	E	Gasoline, Unleaded Petrol	G	1-Nitropropane	Р	Toluene -2,4-Diisocyanate	
Cyclohexanol	E	Glutaraldehyde, <5%	G	Octane	E	(TDI)	Р
Cyclohexanone	Р	Glycerol	E	Octylalcohol	E	1,2,4-Trichlorobenzene	F
Cyclohexylamine	Р	Heptanes	E	Oleic Acid	E	1,1,1-Trichloroethane	Р
Di-N-Amylamine	E	Hesmethyldisiloxane	G	Oxalic Acid	E	Trichloroethylene	Р
Di-N-Butylamine	E	Hexane	E	Palmitic Acid	E	Tricresylphophate	G
Di-N-Butylphthalate	E	Hydrazine Hydrochloric Acid, <30%	E	PCB (Polychlorinated Biphenyls)	G	Turpentine	E
Di-N-Octylphthalate	E		G			Xylenes	F
Diace Tone Alcohol	G	Hydrochloric Acid, 30 -70%	G	Pentachlorophenol	G		

P. Poor Chemical Resistance

The chemical resistance information on this chart is intended to provide general information about the reaction of Nitrile examination glove films to the commonly used chemicals listed.

The rating scale takes into consideration there primary factors: 1) The ability of the chemical to permeate (pass through) the glove films to the commonly used chemical stread: down) the physical structure of the glove film; 3) The risk that contact exposure to the chemical to permeate (pass through) the glove film; 1) The ability of the chemical to permeate (pass through) the glove film; 2) The ability of the chemical to generate the scale of the glove film; 3) The ability of the chemical to permeate (pass through) the glove film; 3) The ability of the chemical to permeate (pass through) the glove film; 3) The ability of the chemical to permeate (pass through) the glove film; 3) The ability of the chemical to generate the scale of the glove film; 3) The ability of the chemical to permeate (pass through) the glove film; 3) The ability of the chemical to generate the glove film; 3) The ability of the chemical to generate (pass through) the glove film; 3) The ability of the chemical to generate (pass through) the glove film; 3) The ability of the chemical to generate the scale of the glove film; 3) The ability of the chemical to generate the scale of the glove film; 3) The ability of the chemical to generate the scale of the glove film; 3) The ability of the chemical to generate the scale of the glove film; 3) The ability of the chemical to generate the scale of the glove film; 3) The ability of the chemical to generate the glove film; 3) The ability of the chemical to generate the glove film; 3) The ability of the chemical to generate the glove film; 3) The glove f

Verify that your gloves are compatible with your specific applications, processes, and materials before using. When performing processes where gloves will receive prolonged, direct exposure to chemicals, use a glove specifically designed for chemical handling. Avoid the risk of exposing your workers, products, and facilities to chemical cross contamination: imme-diately dispose of gloves after contact with chemicals. Double gloving provides additional barrier protection and allows the outer glove to be disposed of after contact with chemicals without exposing the hand.
